

Návod na spustenie

Na naprogramovanie zadania som využila vývojové prostredie Webstorm od Intelij. Po spustení súboru `index.js` sa spustí server, ktorý beží lokálne na porte 3000. Ak server beží v konzole je možné vidieť nasledujúci výpis:

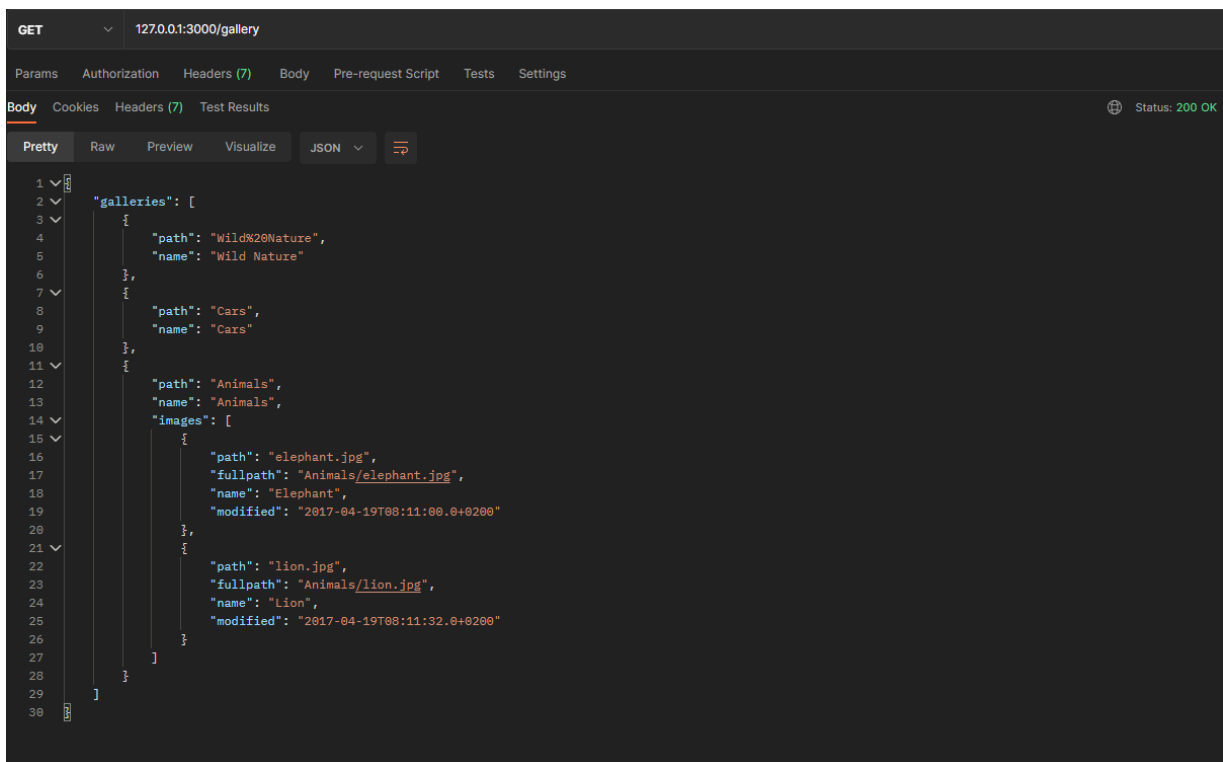

Na testovanie požiadaviek na server a odpovedí servera používam službu Postman. Požiadavky sú posielané na lokálne bežiaci server:

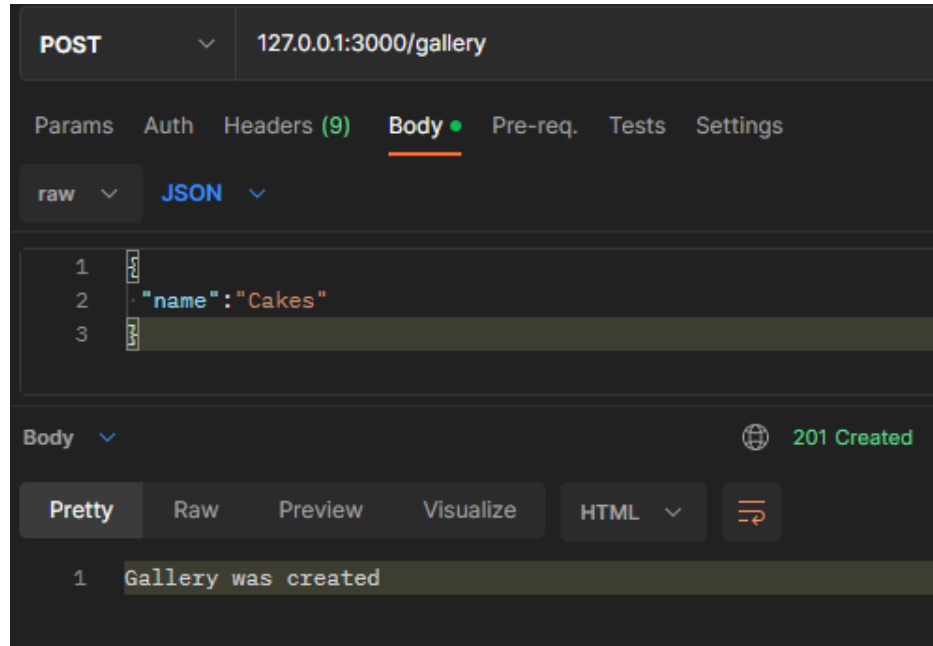

Ukážka požiadaviek na server s odpoveďou servera:

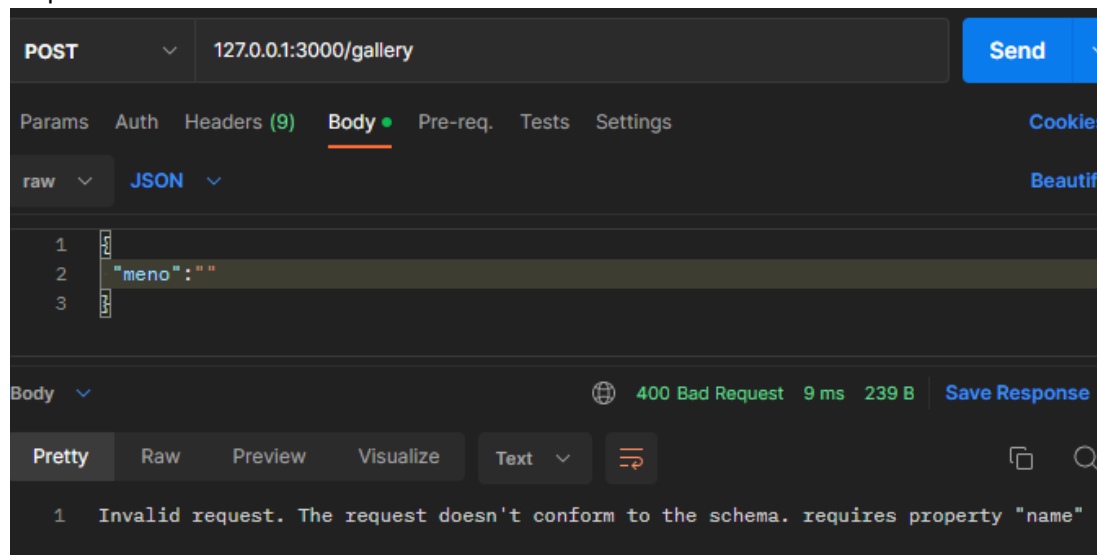

- GET request /gallery
 - response 200

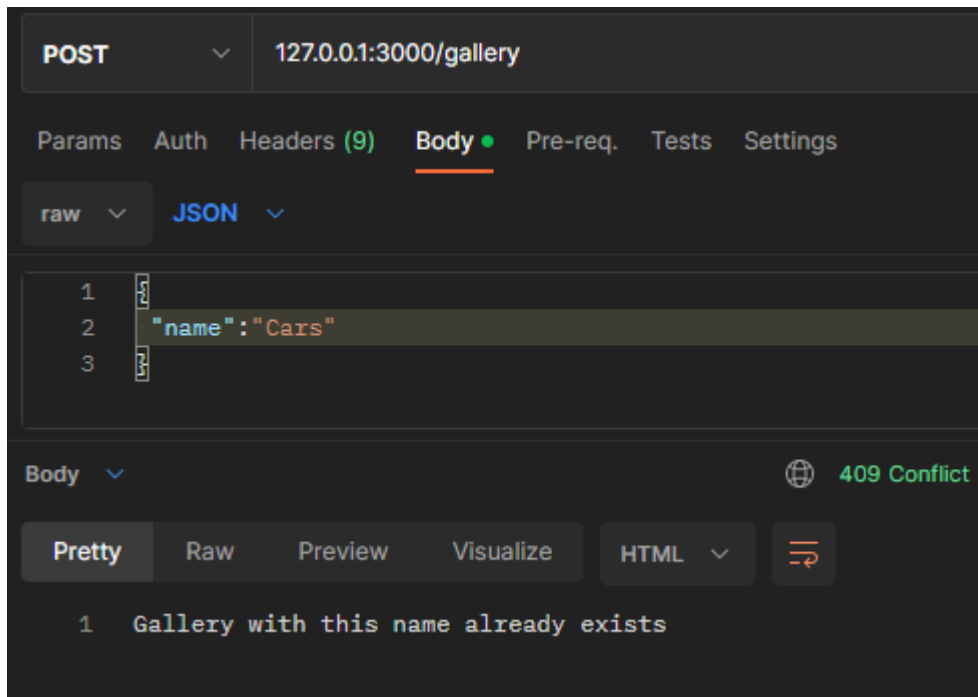

- POST request /gallery
 - response 201

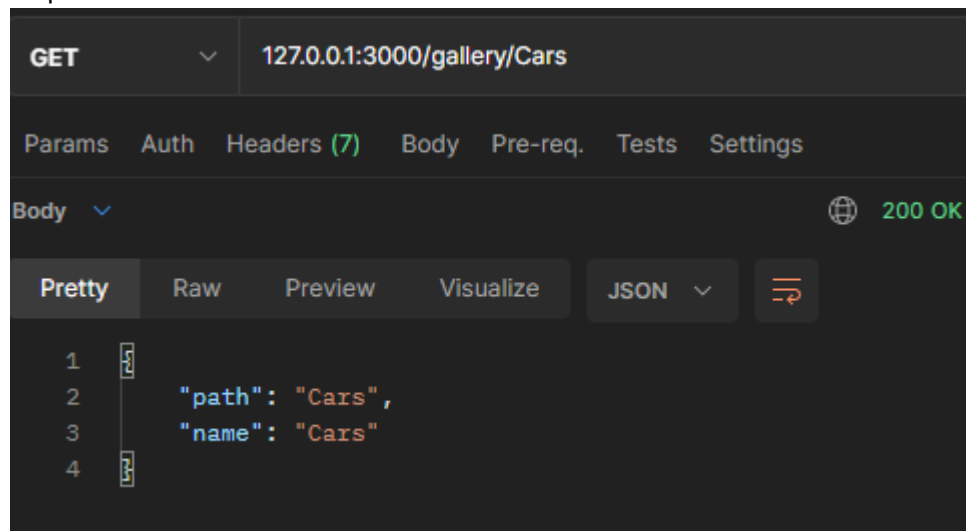

- response 400

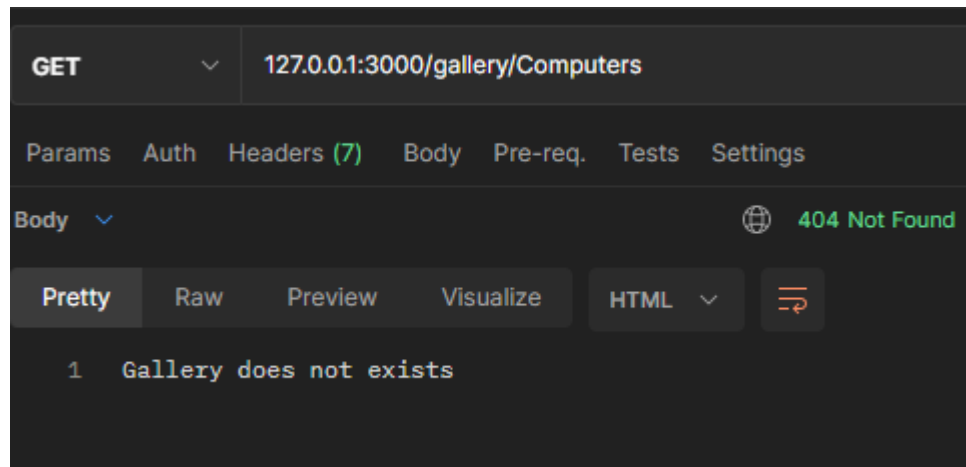

- response 409

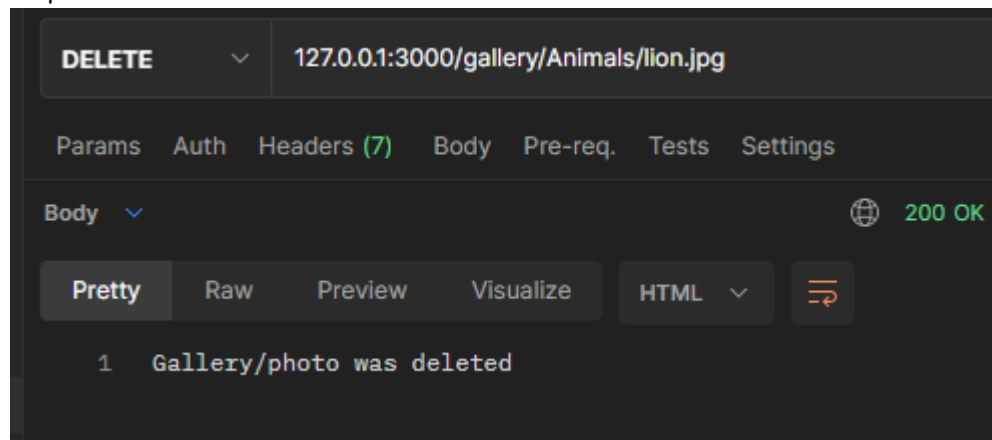

- GET request `/gallery/{path}`
 - response 200

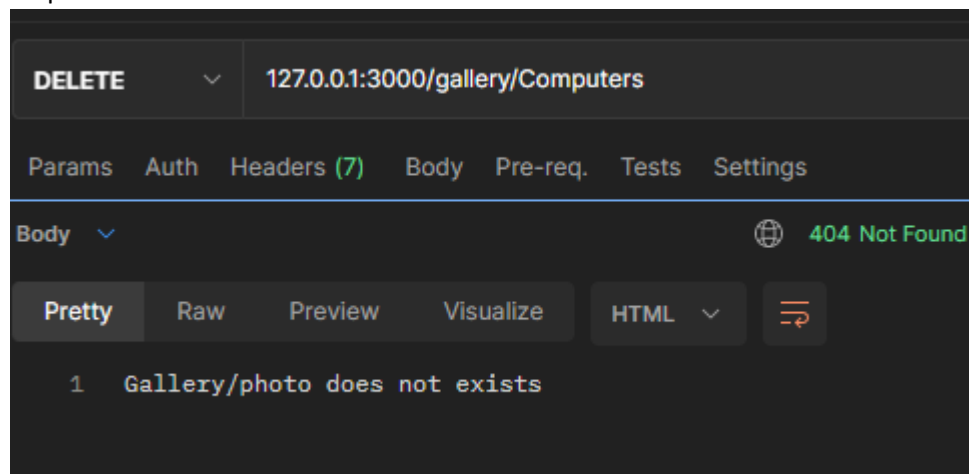

- response 404

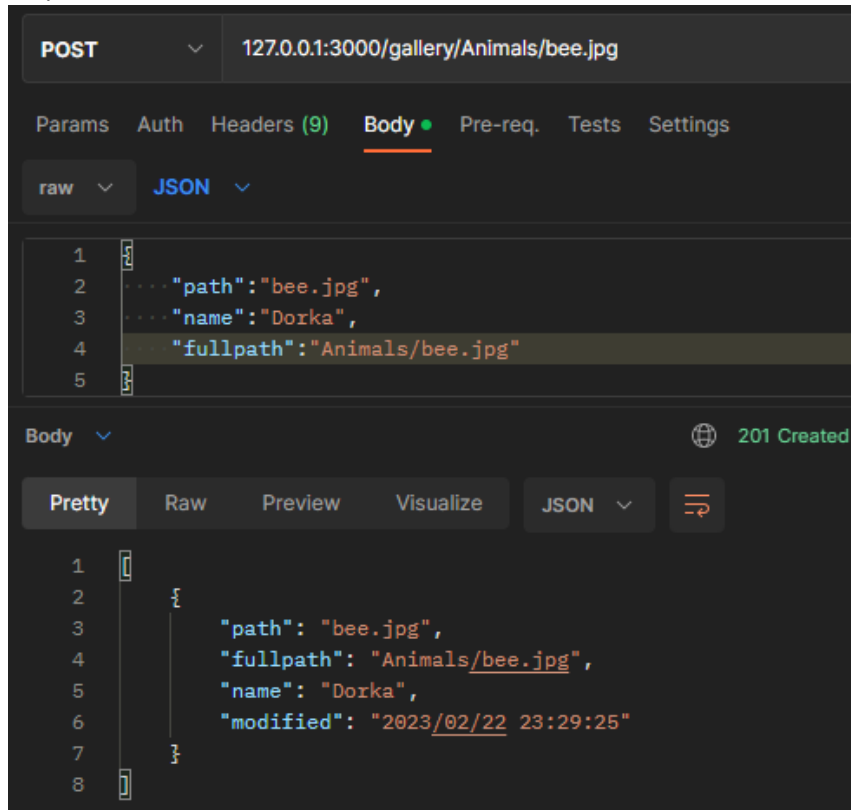

- DELETE request /gallery/{path}
 - response 200

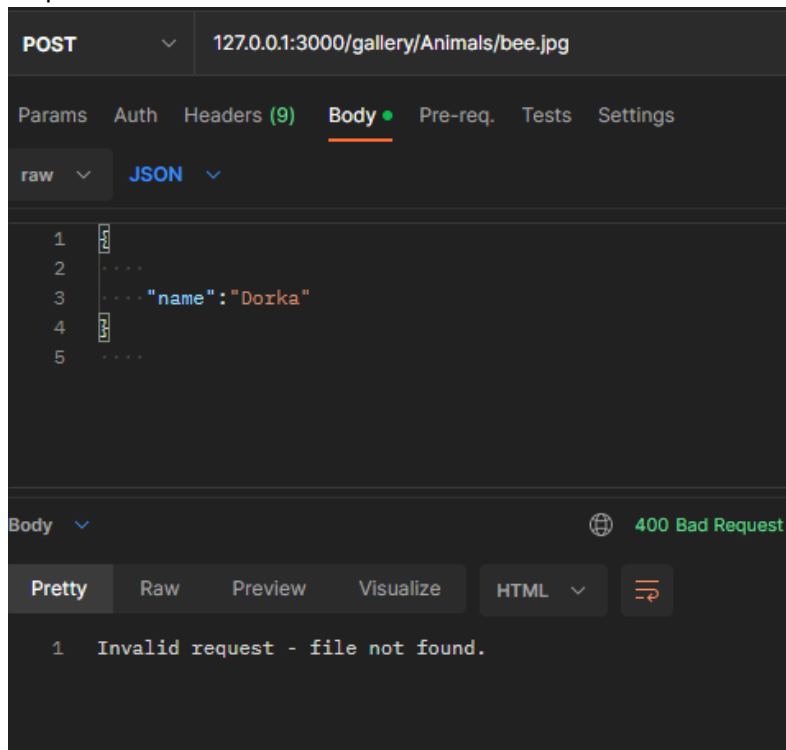

- response 404

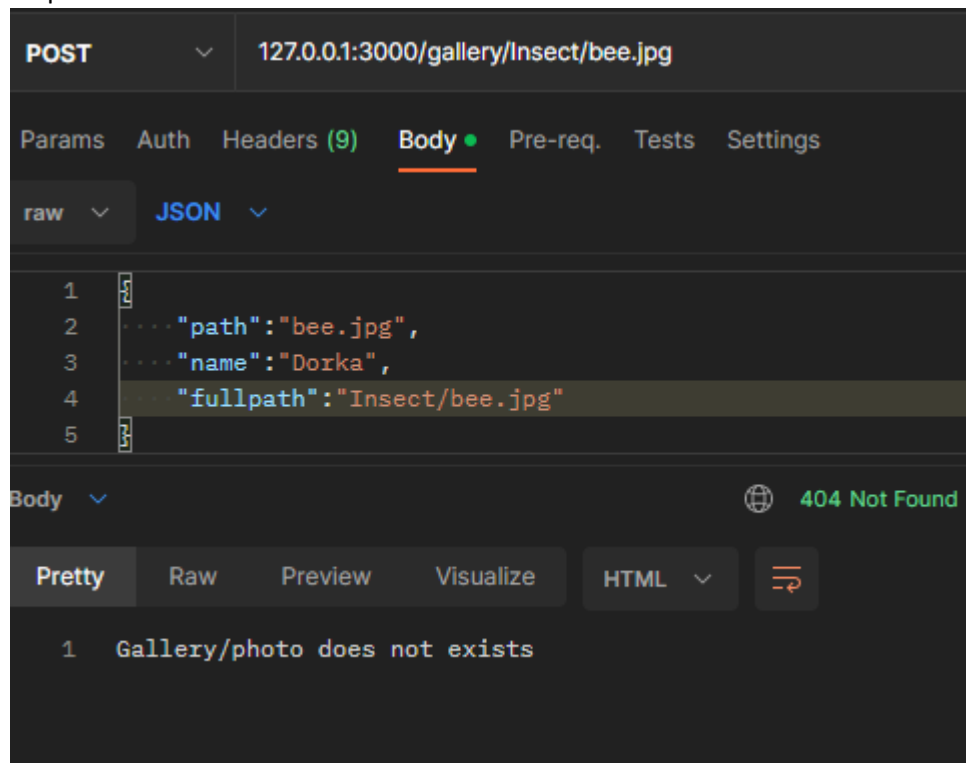

- POST request /gallery/{path}
 - response 201

- response 400

- response 404

- GET request `/images/{w}x{h}/{path}`

- response 200

- response 404
